

Salicylate Free, Harmful Chemical Free, Sunscreens

**Manufactures change ingredients often,
so please read the labels on all products!**

The list below is aspirin free, and harsh chemical free:

Other Names for Aspirin

Acetyl Salicylic Acid - ASA
Acetylsalicylate
Acetylsalicylic Acid
Aluminum Acetyl Salicylate
Ammonium Salicylate
Amyl Salicylate
Arthropan
Aspirin
Benzyl Salicylate
Butyloctyl Salicylate
Calcium Acetyl Salicylate
Choline Salicylate
Ethyl Salicylate
Lithium Salicylate
Methyl Salicylate
Methylene Disalicylic Acid
Octisalate
Octyl Salicylate
Phenyl Salicylate
Sal Ethyl Carbonate
Salicyamide
Saliclanilide
Salicylsalicylic Acid
Santalyl Salicylate
Sodium Salicylate
Stoncyrate
Strontium Salicylate
Sulfosalicylic Acid
Tridecyl Salicylate
Trolamine Salicylate

**Remember:
Kids & Aspirin
DON'T Mix!**

Please Note:

You're at the beach, slathered in sunscreen. Your 5-month-old baby is there, too. Should you put sunscreen on her? Not usually, according to Hari Cheryl Sachs, M.D., a pediatrician at the Food and Drug Administration (FDA).

“The best approach is to keep infants under 6 months out of the sun,” Sachs says, “and to avoid exposure to the sun in the hours between 10 a.m. and 2 p.m., when ultraviolet (UV) rays are most intense.”

What makes babies so different?

For one thing, **babies' skin is much thinner than that of adults, and it absorbs the active, chemical ingredients in sunscreen more easily.** For another, infants have a high surface-area to body-weight ratio compared to older children and adults. Both these factors mean that **an infant's exposure to the chemicals in sunscreens is much greater, increasing the risk of allergic reaction or inflammation.**

The best protection is to keep your baby in the shade, if possible. If there is no natural shade, create your own with an umbrella or the canopy of the stroller.

If there's no way to keep an infant out of the sun, you can apply a small amount of sunscreen—with a sun protection factor (SPF) of at least 15—to small areas such as the cheeks and back of the hands. Test your baby's sensitivity to sunscreen by first trying a small amount on the inner wrist.

Dress infants in lightweight long pants, long-sleeved shirts, and brimmed hats that shade the neck to prevent sunburn. Tight weaves are better than loose. Keep in mind that **while baseball caps are cute, they don't shade the neck and ears, sensitive areas for a baby.**

Summer's heat presents other challenges for babies.

Younger infants also don't sweat like we do. Sweat naturally cools the rest of us down when we're hot, but **babies haven't yet fully developed that built-in heating-and-cooling system. So you want to make sure your baby doesn't get overheated.**

In the heat, **babies are also at greater risk of becoming dehydrated.** To make sure they're adequately hydrated, offer them their usual feeding of breast milk or formula. The water content in both will help keep them well hydrated. A small amount of water in between these feedings is also okay.
